

# CLEARBORE PTY LTD

Water bore & pump cleanser + *X-Fe* iron stain removers

## REVOLUTIONARY IRON & RUST STAIN REMOVERS

Bore water and rusty metal leave unsightly stains that build up over time and become impossible to remove with normal cleansers or those other products that call themselves iron stain removers!

X-Fe products will remove iron and rust stains quickly and easily without the hard scrubbing necessary with the others!

X-Fe products work by dissolving the iron precipitate that causes the stain, whether it's from bore water, old metal, or a stain on the driveway from a leaking radiator.

X-Fe products are simple to apply.

Paint or spray onto the surface, leave for a while and the stain will generally disappear. Should your stain be super stubborn, perhaps a little gentle agitation with a brush or broom and/or repeat application.

Clean up ceramic tiles and porcelain, outdoor furniture, boats and other non-porous surfaces with **X-Fe**.

For concrete, driveways, sandstone and other porous surfaces use **X-Fe Forte**.

Wherever iron or rust stains occur X-Fe products will remove them.

**X-Fe products have a pleasant aroma  
and are completely biodegradable.**

As one happy customer said -  
*X-Fe takes away that horrible dirty, brown appearance that bore water stains leave and it is all done within minutes of its application.  
It really is a wonderful product!*

X-Fe and X-Fe Forte are available in 1 litre & 5 litre containers.
